

# TERMITE MANAGEMENT SYSTEM

## We've got you covered

We are so confident in Flickguard, we offer a comprehensive termite damage warranty to ensure you have peace of mind in the unlikely event that Flickguard fails to provide adequate protection.

The STANDARD Warranty cover is provided at no charge, and is extended each year subject to annual inspection by your Flickguard Installer in accord with the recommendations of the Australian Standard AS 3660. PREMIUM Cover is available for an extra fee and provides extra benefits for you as detailed in the table below:

BENEFIT	STANDARD	PREMIUM
Duration of Warranty	Up To 50 years	Life of the building
Amount of Protection Cover	\$100,000	\$250,000
Protected if termites penetrate the Flickguard	Yes	Yes
Protected if termites bridge around the Flickguard	No	Yes
Can Warranty be reinstated if allowed to lapse	No*	Yes
Increased Excess Payable by Property Owner after 10 years	Yes	No
- Excess after 10 years	\$5,000	-
- Excess after 15 years	\$10,000	-
- Excess after 20 years	\$15,000	-
Subject to Annual Inspections	Yes	Yes

\* We may provide a separate Flick Anticimex warranty to cover the cost of treatment of termites only.

™ Trademark of Flick Anticimex

\* SUBJECT TO ANNUAL INSPECTION. REFER TO THE WARRANTY DOCUMENT FOR COMPLETE DETAILS.

## AUSTRALIA'S MOST TRUSTED TERMITE SECURITY SYSTEM

Flickguard is a **PHYSICAL TERMITE PROTECTION SYSTEM** that deters concealed entry by termites. This is because termites can't get through Flickguard...

...and, since the active ingredient in Flickguard is securely locked away, **Flickguard is safer to use and better for the environment.**

Unlike many other physical termite protection systems, **Flickguard contains a highly potent termite control agent** so it actively kills and deters termites.

### Flexible

Flickguard is a flexible termite management system that may be installed in many difficult and complicated situations, including multiple penetrations and step downs.

Flickguard can even be moulded around unusual building designs and is easily cut and joined ensuring you total protection at all times.

Flickguard is quickly installed and has no sharp edges to affect other tradespeople.

### ENVIRONMENTALLY SAFE

Flickguard poses no risk to the homeowner, construction workers or the environment. It is ideal for use in sensitive environments and in allergy-free housing.

## What is Flickguard

Flickguard consists of an inner core layer impregnated with deltamethrin. Our Thermo-compression Technology™ locks the deltamethrin into the core layer before it is laminated top and bottom with a rugged plastic membrane. This entrapment process ensures that the deltamethrin remains sealed within the inner core.

This means it is non-hazardous to anyone handling the product or who comes into contact with it. The control agent in Flickguard, deltamethrin, is an insecticide that is modelled on the natural pyrethrins produced by the chrysanthemum daisy, nature's own cure for insect problems. Consequently it is low in toxicity to warm-blooded animals, though deadly to termites and other insects. Better yet, deltamethrin both kills and strongly repels termites.

The inner core of Flickguard adds to the durability and effectiveness of Flickguard, as well as ensuring the deltamethrin remains encased so it cannot escape into the environment. Flickguard has undergone extensive independent evaluation. The Flickguard inner core, in addition to holding the deltamethrin, remains ever ready to kill and deter termites and is structured to prevent termites from penetrating the product.

The upper green plastic layer is thicker and provides an additional benefit by serving as a moisture vapour barrier or damp-proof course.

The bottom red plastic layer prevents the deltamethrin from leaching into the environment, thereby ensuring that it remains locked safely away from any soil organisms and soil moisture.

™ Thermo-compression Technology is a trademark of Ensystex Inc., used under licence by Flick Anticimex.

## Proven performance without costing the Earth

The polymers used in Flickguard are inedible to termites and, since Flickguard also acts as a moisture barrier, it further reduces the attractiveness of a property to termites. In the unlikely event that any termites should penetrate the bottom plastic layer, they meet with the deadly (to termites) deltamethrin, ensuring their rapid demise... and since the deltamethrin remains safely locked up within the inner core, it does not get into the environment.

Don't let termites destroy your property.

## Flickguard is tough

Flickguard is exceptionally tough. A very sharp cutting blade is required to cut Flickguard. Blunt objects, workmen's boots, etc. have little chance of penetrating Flickguard.

In the unlikely event that a hole is accidentally produced, it is easily repaired.

## Proven performance

Of course Flickguard was designed and tested for the toughest conditions and has been tested in tropical conditions in Australia and SE Asia to ensure protection against our voracious termites.

Flickguard is so effective in securing properties against termites, it is protecting more than 100,000 homes and buildings throughout Australia, with numbers growing daily.

## Technical support

Flickguard is supported technically by a team of professionals, all with extensive experience in the termite management industry.

Choose Flickguard for better termite security.

- **Easier to install** and work with due to slimmer and more compacted profile, making it less obtrusive in modern construction designs.
- **Tough and rugged** so Flickguard will not tear like some other products.
- **Flexible** to suit all modern construction scenarios.
- **Safer handling** is provided since Flickguard features Thermo-compression Technology™ to prevent the escape of deltamethrin.
- **Superior performance** comes from the use of deltamethrin giving active termite protection. Deltamethrin displays unequalled insecticidal efficacy and repellency and deltamethrin is three times more insecticidally potent than bifenthrin<sup>1</sup>.
- **CodeMark Certified** through the Australian Building Codes Boards (ABCB) ensuring compliance with the National Construction Code (NCC) and compulsory acceptance by building certifiers.
- **Proven to last for fifty years** or more, ensuring lifetime protection of buildings.
- **Environmentally responsible** as recognised by Green Product Community listing.
- **Proven to work** with more than 100,000 homes and buildings protected, and the number grows daily! Flickguard is protecting homes and buildings throughout Australia.
- **Better grout and mortar adhesion** during construction due to embossed upper surface.
- **Warranty** protects builder and property owner and is upgradeable to protect against termites bridging the Flickguard system.

Proven termite protection.

## CodeMark

CodeMark is a building product certification scheme administered by the Australian Building Codes Board. Third-party CodeMark certification bodies evaluate and certify products to ensure they meet specified requirements of the Building Code.

CodeMark gives users the confidence that their building products comply and relevant legislation requires building control authorities to accept CodeMark certified products.

For further information visit [www.abcb.gov.au](http://www.abcb.gov.au)

## Compliance

Flickguard Termite Protection holds a CodeMark Certificate of Conformity, CM40258, confirming compliance with the Building Code of Australia Volume One and Volume Two including Queensland and Northern Territory variations, as a termite protection system to deter concealed subterranean termite entry into buildings.

Independent trials, conducted in accordance with the requirements of AS 3660 Termite management Part 3 Assessment criteria for termite management systems and other tests show that Flickguard will remain as an effective termite management system in excess of 50 years, even in tropical situations.
